

QUICK START GUIDE

(PLEASE PLACE THIS STICKER ON POOL BREAKER BOX OR LOAD CENTER)

- **PLEASE MAKE SURE PUMP AND FILTER SYSTEM IS SCHEDULED TO RUN 24 HOURS PER DAY**
Running your system 24 hours per day ensures that you are filtering water constantly. The movement of water in the pool ensures that dirt, pollen and other contaminants are more likely to remain suspended and be filtered out rather than settling into the pool surface.
- **ENSURE THE POOL IS PROPERLY BALANCED AT START UP AND REMAINS WITHIN THE FOLLOWING PARAMETERS:**

Total Chlorine .6 – 1.2 ppm	Alkalinity 80-120 ppm
pH 7.2 – 7.6	Calcium 160 – 300 ppm
CYA 10-30 ppm	TDS (dependent on sanitization type)
Phosphates < .2 ppm	Metals (iron/copper) 0

- **MAINTENANCE**
 - **Surface Maintenance** – manually vacuum and brush the pool weekly.
 - **Skimmer Cleaning** – use a soft sponge to remove waterlines inside the skimmer.
 - **Follow the equipment manufacturer's maintenance instructions.**

POOL MUST BE REGISTERED WITHIN 30 DAYS OF COMPLETION. Please scan the QR code or visit us at <https://biodesignusa.com/register/> to register your pool and access warranty information as well as detailed maintenance information.
